

## INISHOWEN GOLD PROJECT

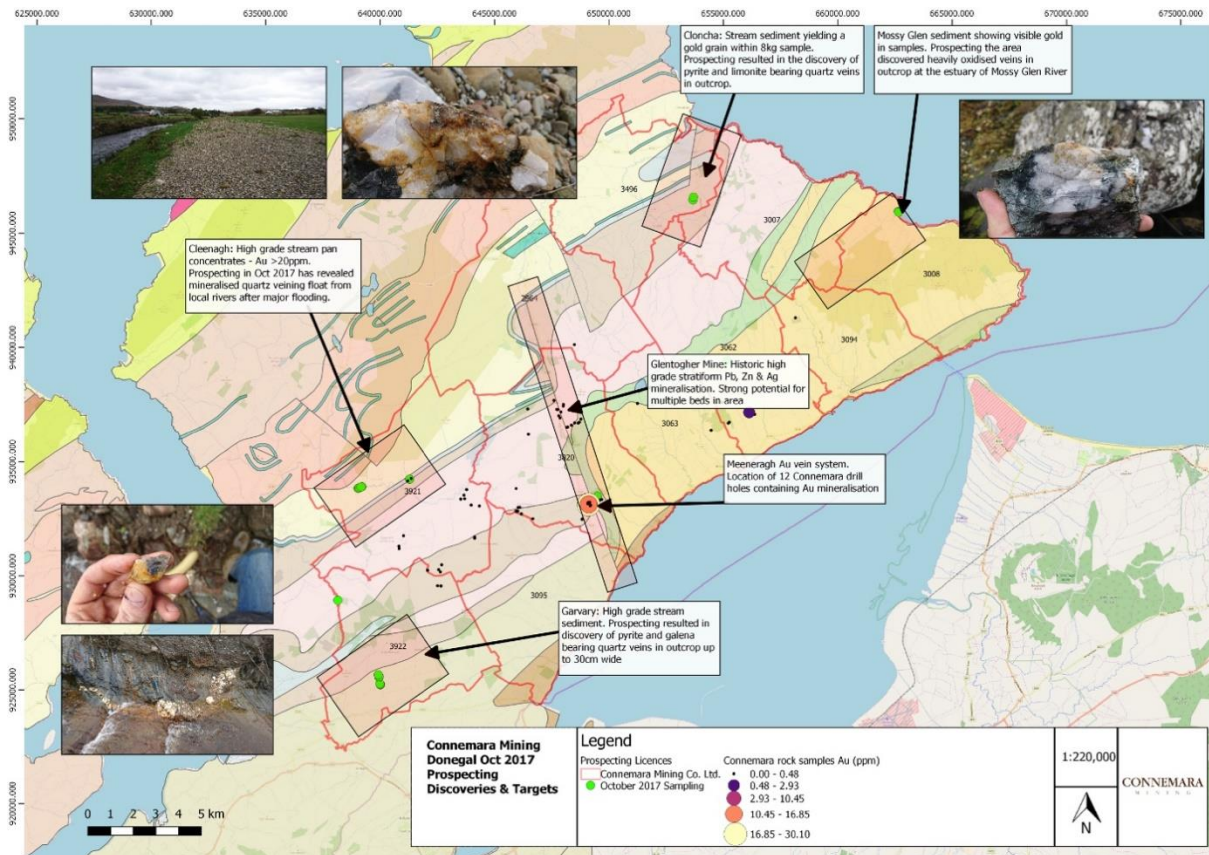

The project consists of a contiguous block of 11 licences (423 km<sup>2</sup>) covering much of the Inishowen peninsula in north County Donegal. Initial drilling success was achieved in 2016, Arkle Resources being the first company known to drill specifically for gold in the area. Drilling recommenced in September of 2017 at the Meeneragh prospect in order to build on the 2016 drilling which gave intercepts of 3.05m grading at 5.8g/t Au and 4.82m at 5.48g/t Au.

Drilling at the Meeneragh prospect, Inishowen Gold Project

The targets are similar (mesothermal veins) and hosted in similar geology (Dalradian Supergroup) to the deposits at Galantas Mine and at the Curraghinalt Project in Tyrone 40 km away. Arkle Resources is the first company to drill for gold targets in the area.

Drill targets were selected at the Meeneragh prospect and two phases of initial drilling were completed in 2016, which identified a series of parallel gold bearing veins. Five additional drill holes were completed in October 2017 in order to better understand the orientation of the high grade veins intercepted in 2016 and to locate further veins noted in historic exploration, lying to the south. The 2017 drilling has identified further narrow quartz veins in the vicinity of the high-grade intersection in 16-MR-07 and 16-MR-07 drilled in 2016. It is clear that the veins pinch and swell, orientation is with the bedding.

Prospecting has identified sulphide in quartz in four new areas, each of which is promising to host gold mineralisation. To date, a total of 1113 metres has been drilled on twelve holes. Highlights of drill results are shown below.

Hole ID	From (m)	To (m)	Width (m)	Gold (g/t)
16-MR-03	23.05	26.10	3.05	5.8
16-MR-07	8.13	12.95	4.82	5.48
16-MR-07	8.35	8.48	0.10	74.5
16-MR-07	9.14	3.98	0.24	69
17-MR-08	21.50	22.00	0.50	14.25
17-MR-09	42.60	43.60	1.00	0.35
17-MR-11	5.90	6.40	0.50	0.43
